PSYCHOLOGY

Office location: 415 Milbank Hall
Office contact information: 212-854-2069; psych@barnard.edu

Department Administrator: Danielle Feinberg, dfeinberg@barnard.edu

The Field of Psychology

Psychology is the scientific study of the mind and behavior. The concerns of the discipline range widely, from fundamental questions about human nature to applications of psychology in daily life. Research conducted by faculty members in the Department examine growth and development, learning and memory, perception, language, social knowledge and behavior, the self, the effects of stress, conflict and cooperation, and the neural functions that underlie behavior. Students who choose the major concentration in Psychology study the literature and empirical practices across the discipline, and can gain direct experience by participating in laboratory settings on campus and in the wider community, and in health centers nearby. Many Psychology majors continue for graduate training in psychology, neuroscience, or education, while others enter professional schools for training in medicine, law, or business.

Mission

Through courses, advising and laboratories, the Department of Psychology educates students about the intellectual perspectives and empirical methods of the contemporary discipline of Psychology. Introductory courses provide an overview of the field and its major components, emphasizing the practices by which hypotheses are formed and new evidence is created. Middle-level courses consider significant topics in sharp focus, while upper-level seminars use classic and recent technical literature as a springboard for discussion in groups of advanced students. The Department also encourages students to participate in research and in the many different Departmental and College-wide forums for discussion and refinement of scientific work.

Student Learning Outcomes

A student graduating with a major concentration in Psychology will know how to:

• Describe the historical foundations and contemporary problems in psychology;
• Portray the sub-disciplines in psychology;
• Explain the application of psychological knowledge to questions of behavior and mental processes;
• Identify and assemble current research literature about a topic within psychology;
• Critique a psychological theory and the evidence offered to secure its premises;
• Design a study to test a psychological hypothesis;
• Weigh the strengths and weaknesses of a research design and method;
• Perform basic descriptive and inferential statistical tests to summarize measures and to identify reliable results;
• Communicate theories, hypotheses, empirical methods, and research findings in written and spoken form.

Programs of Study

The Department of Psychology at Barnard offers a Major and a Minor in Psychology.

Student Advising

Advising Resources

Students typically declare their major at the end of their sophomore year, before program filing. Keep your eyes open for the program planning meeting where you can learn about the major and meet the faculty. You can also declare your major earlier, or change your major at other times. If you are a junior planning to change to a psychology major from another department, you should meet with the Department Vice Chair for Student Advising (or your future advisor) to discuss your program and see if it is possible to finish the requirements in time to graduate.

To become a major in Psychology submit the major declaration form through Slate. You will be assigned a major advisor based on faculty availability. Note that you are not required to meet with anyone in the Department prior to submitting this form. Also, please be patient as it can take several days to complete the process of assigning a major advisor.

A student will be assigned a major advisor when she declares her major at the end of the sophomore year. The major advisor will approve her programs and monitor her progress with her requirements during the junior and senior years. All Barnard Psychology full time faculty members are familiar with the broad range of sub-disciplines within psychology and will generally be able to provide guidance in areas other than their own. Students whose advisor goes on leave for a semester or academic year will be assigned to a new advisor if necessary.

Guidance for First-Year Students

The following are Introductory Psychology Courses and Courses Recommended for First Years:

• PSYC BC1001 Introduction to Psychology
• PSYC BC1010 Introductory Laboratory
• PSYC BC1020 Behavioral Research Methods and Analysis
• PSYC BC1088 Science of Living Well
• PSYC BC1099 Science and Scientists
• PSYC BC1101 Statistics

Enrolling in Courses

In order to enroll in a lab or statistics course in the Department of Psychology at Barnard College, students must have taken PSYC BC1001 Introduction to Psychology, or its approved equivalent. For PSYC BC1010 Introductory Laboratory to Experimental Psychology, students may concurrently be enrolled in PSYC BC1001.

Although lecture and laboratories are listed as individual courses with their own call numbers and credits, the courses are linked, conceptually and formally. This means that the only way to get credit for lab is to receive a passing grade in the corresponding lecture course. Practically, this means that you must enroll in corresponding lecture and lab courses concurrently (in the same semester). The only exception to this rule is PSYC BC1010 Introductory Laboratory to Experimental Psychology since there
is no "attached" lecture to this lab course. However, PSYC BC1001 Intro lecture must be completed before or in the same semester as BC1010 lab.

Note that as of Fall 2021, PSYC BC1001, PSYC BC1101 Stats, and PSYC BC1020 Research Methods are prerequisites for all PSYC BC 2000-level lab courses.

Preparation for Graduate Study
The Department of Psychology highly recommends that students interested in clinical psychology take advantage of research and clinical experiences while at Barnard. Living in New York City affords students a tremendous number of opportunities for placements and we encourage students to take advantage of this while they can. Graduate schools will be evaluating applicants on their research experiences, as well as their opportunity to work with people in mental health settings. Getting involved in psychology outside of the classroom gives students the opportunity to learn what type of work they like and don’t like, what professional environments best suit them, and with what populations they might like to help treat. Additionally, working with a mentor or supervisor in a research and mental health setting gives students a resource for stronger letters of recommendation.

Helpful information about applying to graduate school can be found in the 
Graduate Study Handout, which you can obtain from the Department Administrator. In addition, Professor Kathleen Taylor is available to advise students interested in graduate school in psychology.

Coursework taken outside of Barnard
Advanced Placement Credit
For any student entering Barnard in Fall 2016 and thereafter: A score of 4 or 5 on the Psychology Advanced Placement (AP) exam or a score of 5 or 6 on the International Baccalaureate (IB) exam does allow you to be exempt from BC1001 Introduction to Psychology; however another PSYC course must be taken in its place. This includes students who elect a Major or Minor in Psychology, as well as non-major students who choose to fulfill the College’s General Education Requirements with Psychology. If you choose to take BC1001, the College will also count your acceptable AP and IB scores as 3 credits toward your degree. Further information may be found on the Registrar’s website.

For students who entered Barnard College before fall 2016, the major distinction is that the College will not give a student credit for AP/IB as well as credit for BC1001. That is, if you enter Barnard with a score of 4 or 5 on the AP/IB and choose to take BC1001, you would not also get three points toward graduation.

Columbia College Courses
Select courses may be credited toward the major/minor with the permission of the Chair or Assistant Chair.

Transfer Credit
There are two steps in obtaining approval for courses taken at another institution. First, you must receive Barnard College credit for the course from the Registrar. Second, you must obtain approval via Slate from the Psychology Department Vice Chair for Student Advising to count the course toward your major requirements.

(Planned from the Registrar will ensure College credit, but will not ensure that the course can count toward the major.)

Students already enrolled at Barnard who plan to fulfill major requirements with a course from another institution are strongly encouraged to seek approval from the Department Vice Chair for Student Advising prior to filing their program. This applies to summer courses (including those taken at Columbia), courses taken abroad, and courses taken at institutions other than Barnard or Columbia during the fall and spring semesters.

Also, note that transfer students follow the requirements (major and College/Gen Ed) that correspond to the year they entered Barnard (and not their class year). One’s “entrance year,” is listed as “catalogue year” in the degree audit.

Study Abroad Credit

• Classes taken abroad through Columbia-led programs (i.e., those administered by Columbia’s Center for Global Engagement) are treated as Columbia courses, equivalent to those taken on the Morningside Heights campus.

• Classes taken abroad through other institutions or programs are treated as transfer credit and are subject to the same policies as other transfer courses. Accordingly, there will be a limit on the number of study abroad courses taken at other institutions that can be counted toward the major or minor.

• To receive credit toward the major or minor for a study abroad course (whether taken through a Columbia program or another institution/program), students must submit a Study Abroad Approval form through Slate and obtain the approval of the Chair or departmental representative.

Summer Credit

• Summer courses at Barnard are equivalent to those taken during the academic year. Courses that have been approved for the fulfillment of departmental requirements will automatically count toward the major.

• Courses taken at other institutions (including Columbia) are considered transfer credit and are subject to the same policies governing other transfer courses. To receive major or minor credit for a summer course taken at another institution, students must submit a Summer Course form through Slate and have it approved by both the Registrar’s Office and the Chair or departmental representative.

Research Methods in Psychology and the Senior Capstone Project

Coursework in Research Methods
The Department offers the course, PSYC BC1020 Behavioral Research Methods and Analysis, which is 3 points. This course introduces students to the fundamental scientific principles, experimental methods, and analytical approaches involved in the study of human behavior. The major topics covered, include: how basic scientific approach can be gainfully and ethically used to study human behavior; as well the most prevalent manners of collecting data in behavioral research, and the most common types of statistical analyses and tests such data is subjected to. The latter topics in the course introduce some of the more advanced experimental designs and statistical approaches that are more specific to the social sciences. This course is offered every semester and is a prerequisite to higher level PSYC courses.
Research Opportunities
There are many opportunities for a student to participate in research in laboratories and in the field. Each member of the full time faculty supervises research by students, and many nearby laboratories, health centers and research institutions welcome the participation of our students in their projects. Independent Study, the Senior Research Seminar, and the Toddler Center Seminar are courses for student researchers.

The Senior Capstone Project
To have a course count towards fulfilling the Senior Requirement of the psychology major, it is to be taken in one of your last two semesters at Barnard, and can be almost any 3000-level PSYC/NSBV seminar including PSYC BC3465-66, BC3473, BC3606 (taken for 3 or 4 credits)

Also, you may fulfill the Senior Requirement with a Columbia Psychology seminar or supervised individual research but you should consult with your major adviser first. You will "declare" your Senior Requirement when the Department Administrator sends an email to all seniors with a Google form link asking for the course number, name and instructor.

The final assignment in this course will serve as the Capstone Project. This project represents the culmination of academic work in the major. The form of the project may vary across courses, but capstone projects generally allow students to develop records of individual research that include theoretical engagement, the development of creative projects or research, or original empirical and interpretative analysis. You will submit the project to your instructor, and may be asked to submit an abstract of your project to the Department to add to its senior archive of students’ achievements. For this final project, you will receive (in addition to the letter grade for the course) a grade of Pass (P), Pass with Distinction (PD), or Fail (with “P” and “PD” appearing on your transcript). Additionally, many Psychology majors have the opportunity to celebrate their capstone project by presenting it at the annual Psychology Spring Research Festival in April. If interested, please speak with your instructor, mentor, or the department administrator for more details.

Departmental Honors and Prizes

Departmental Honors
As per the College, departments are permitted to nominate up to 20% of an academic year’s graduating class (October, February and May). The primary, and in most cases, only information used to determine nominations is the major GPA. This includes passing letter grades (C- and above) from all of the required PSYC courses. If a student has completed more than the required courses and wishes for these grades to be included in her Major GPA, they must contact the Department Administrator. The non-PSYC courses required for the major are not included (note, these can be taken as “pass-fail” assuming the student receives a “pass”). There is no minimum GPA to meet, however, historically we have awarded Honors to students with a major GPA over a 4.0.

Academic Prizes
The following awards are bestowed upon psychology students at the department level. Note that faculty nominate individual students, and the Department allows for multiple recipients for each award.
- The Hollingworth Prize for an outstanding research project in psychology
- The Millennial Psychology Prize for a student who plans to continue her scientific or professional training in psychology, or a related discipline
- The Ida Markewich Lawrence Prize for the best paper in psychology, preferably child psychology, by a major
- The Faculty Recognition Prize for Distinguished Achievement in Psychology
- The Faculty Recognition Prize for Continued Dedication to Psychology
- The Intellectual Frontiers Award for Distinguished Accomplishment in Psychology
- The Spirit of Inquiry Prize for Distinguished Accomplishment in Psychology
- The Young Scholar Prize for an Outstanding Research Project in Psychology

Other Important Information

Field Work
The Field Work Seminar in Psychological Services and Counseling combines a placement in a clinical, educational, medical, and other institutional settings, with a weekly discussion of applied aspects of psychology. Drawing on a student’s experience in the field, the discussions examine theoretical approaches to clinical problems and cases.

Teaching
Introductory and Laboratory courses provide opportunities for student teaching under the supervision of a member of the faculty. Teaching assistants are typically recruited for this role.

College Science Requirement
A student who wishes to fulfill the College science requirement in Psychology is encouraged to take her lab courses early in her career at Barnard. Senior students do not receive priority for placement in a lab course.

Chair: Koleen McCrink (Professor)
Department Vice Chair for Student Advising: Michael Wheaton (Assistant Professor)
Professors: Peter Balsam (Samuel R. Milbank Professor), Colin Wayne Leach, Robert E. Remez, Ann Senghas, Rae Silver, Lisa Son
Associate Professor: Tara Well
Assistant Professors: Michelle Greene, Erica Musser, Kate Thorson, Kaytee Turetsky
Senior Lecturer: Ken Light
Lecturers: Robert Brotherton, E’mett McCaskill (Psychology and Neuroscience & Behavior), Kathleen Taylor
Requirements for Students following the Foundations Curriculum

Important Changes:
If you entered Barnard in or after Fall 2021, the requirements for a Major in Psychology have changed. Three core introductory psychology courses (BC1001, BC1101, BC1020) are pre-requisites for all 2000-level PSYC lab courses.

For all students: The minimum number of courses to complete the Psychology Major is 13 (and minimum credits, 37.5). Note that at least six of the required PSYC courses, worth three or more credits each, must be taken at Barnard or Columbia. All PSYC courses must be taken for a letter grade (C- or better).

### Three Core Introductory PSYC Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSYC BC1001</td>
<td>INTRODUCTION TO PSYCHOLOGY (lecture; prerequisite for higher level Psychology courses)</td>
<td>3</td>
</tr>
<tr>
<td>PSYC BC1101</td>
<td>STATISTICS LECTURE AND RECITATION (lecture with recitation, preferably taken by the end of sophomore year)</td>
<td>4.00</td>
</tr>
<tr>
<td>PSYC BC1020</td>
<td>BEHAVIORAL RESEARCH METHODS AND ANALYSIS (REQUIRED FOR STUDENTS ENTERING BARNARD IN OR AFTER FA21)</td>
<td>3</td>
</tr>
</tbody>
</table>

### Three PSYC Lecture Courses

At least one from each group

**GROUP 1:**
- PSYC BC2107  PSYCHOLOGY OF LEARNING - LEC
- PSYC BC2110  PERCEPTION - LEC
- PSYC BC2115  COGNITIVE PSYCHOLOGY - LEC
- NSBV BC1001  INTRODUCTION TO NEUROSCIENCE

**GROUP 2:**
- PSYC BC2125  PSYCHOLOGY OF PERSONALITY - LEC
- PSYC BC2129  DEVELOPMENTAL PSYCHOLOGY - LEC
- PSYC BC2138  SOCIAL PSYCHOLOGY - LEC
- PSYC BC2156  CLINICAL PSYCHOLOGY

### Two PSYC Laboratory Courses

chosen from any group (taken concurrently with their associated lectures):

**GROUP 1:**
- PSYC BC2106  PSYCH OF LEARNING - LAB
- PSYC BC2109  PERCEPTION - LAB
- PSYC BC2114  COGNITIVE PSYCHOLOGY - LAB
- NSBV BC2001  LABORATORY IN NEUROSCIENCE

**GROUP 2:**
- PSYC BC2124  PSYCH OF PERSONALITY - LAB

### Additional PSYC Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSYC BC2128</td>
<td>DEVELOPMENTAL PSYCH - LAB</td>
<td></td>
</tr>
<tr>
<td>PSYC BC2137</td>
<td>SOCIAL PSYCHOLOGY - LAB</td>
<td></td>
</tr>
<tr>
<td>PSYC BC2155</td>
<td>CLINICAL LABORATORY</td>
<td></td>
</tr>
<tr>
<td>PSYC BC1010</td>
<td>INTRO LAB EXPERIMENTAL PSYCH</td>
<td></td>
</tr>
<tr>
<td>PSYC BC3465</td>
<td>Field Work # Research Seminar: Toddler Center (PSYC BC3465 and PSYC BC3466 is a year-long course)</td>
<td></td>
</tr>
<tr>
<td>PSYC BC3473</td>
<td>CLINICAL FIELD PRACTICUM</td>
<td></td>
</tr>
<tr>
<td>PSYC BC3606</td>
<td>INDEPENDENT STUDY (taken for 3 or 4 credits)</td>
<td></td>
</tr>
</tbody>
</table>

### Outside Courses

- One course from a cognate discipline (ANTH, COMS, ECON, LING, PHIL, SOCI, and STEM)
- Two lectures in another science, plus one laboratory course (ASTR, BIOL, CHEM, EESC, or PHYS)

### One Additional Research Experience (*NOT REQUIRED FOR STUDENTS WHO ENTERED BARNARD IN OR AFTER FA21)

Choose from the following:
- a third PSYC lab (with lecture); or
- a lab in a science outside of PSYC; or
- one semester of BC3606 Independent Study (taken for 3 or 4 credits)

---

1. When appropriate, approval for equivalent introductory courses taken at another school can be granted by the Department Vice Chair for Student Advising. A student who receives a score of 4 or 5 on the Advanced Placement (AP) examination in Psychology, or a score of 5 or 6 on the International Baccalaureate (IB) exam in Psychology can choose not to enroll in PSYC BC1001 INTRODUCTION TO PSYCHOLOGY. She must, however, enroll in another PSYC course, worth three or more credits, in its place. Also please note, that even with experience in a high school AP course, the Department highly recommends that all students enroll in PSYC BC1001. If a student with acceptable AP/IB scores chooses to enroll in BC1001, she will receive both major and college credit for the course, as well as three points toward graduation (for the AP/IB credit).

2. If a student would like to enroll in a Statistics course outside of the Barnard Department of Psychology to fulfill this portion of the major requirements she should obtain prior approval from the Chair or the Vice Chair for Student Advising. Note that there are several courses offered by Columbia that are equivalent to PSYC BC1101 which means you cannot receive credit for both courses (you must choose one or the other to apply towards your major requirements).

3. Students are strongly advised to enroll in only one PSYC laboratory course per semester. Also, students should check their calendar of commitments and review the lab attendance policy before signing up for a lab. Each laboratory follows the same policy about attendance:
  - You must attend every Laboratory meeting, and you must be present for the duration of the meeting.
  - You may not arrive late.
  - You may not depart before you complete the day’s procedure.
• If you miss more than a single Laboratory session you will be dismissed from the Laboratory and you will not be permitted to remain enrolled.

4 PSYC BC1010 is intended for First Year and Sophomore students who have not previously taken any psychology labs. It is not a requirement; however, if taken, it should be taken prior to one of the Group 1 and 2 topical labs. PSYC BC1001 must be taken prior to or concurrently with BC1010.

A student may elect to fulfill the Senior Requirement with a Columbia Psychology Department Seminar or Supervised Individual Research with a Columbia faculty member. Prior approval for this is needed.

5 For all other 3000-level courses, you must notify the professor at the beginning of the semester that the course will be used as your senior requirement.

A maximum of two of the following courses may count toward the major (though more could count toward College requirements):

- PSYC BC3465 Field Work # Research Seminar: Toddler Center (fall semester)
- PSYC BC3466 FIELD WORK # RESEARCH SEMINAR: TODDLER CENTER (spring semester)
- PSYC BC3606 INDEPENDENT STUDY (Formerly PSYC BC3601-3608)

The Psychology Department defaults to rules and exemptions allowed by the home department. Meaning, if Biology, for example, accepts a course substitution for one of its labs, Psychology will honor this course as fulfilling part of the Outside Science component of the Psychology Major. Also, the two science courses can be from different departments.

Requirements for the Minor

The minor consists of six courses in Psychology. All courses must be taken for a letter grade (C- or better). Exemption and substitutions are as noted for the major.

Two Additional PSYC Courses

Lectures and/or seminars chosen from any course offered by the Department that is three or more credits each.

PSYC BC1001 INTRODUCTION TO PSYCHOLOGY. 3.00 points.

This course is a prerequisite for the Psychology Major, as well as for most other Barnard PSYC courses (be sure to check all course information before enrolling in a course). The following Columbia University courses are considered overlapping and a student cannot receive credit for both the BC course and the equivalent CU course: UN1001 The Science of Psychology; and UN1021 Science of Psychology: Explorations/Applications

Spring 2024: PSYC BC1001

PSYC BC1010 INTRO LAB EXPERIMENTAL PSYCH. 2.50 points.
Prerequisites: Note: This introductory lab course is intended for students who have not previously been enrolled in a psychology lab course. It is also highly recommended for First Year and Sophomore students.
Corequisites: PSYC BC1001
Corequisites: PSYC BC1001, or its equivalent, must be completed prior to or concurrently with BC1010. This lab course is intended for students who have not previously been enrolled in a psychology lab course; and a majority of seats are reserved for First Year and Sophomore students. A laboratory-based introduction to experimental methods used in psychological research. Upon successful completion of this course, students will know how to review the primary literature and formulate a hypothesis, design an experiment, analyze data using statistical methods, communicate the results of a scientific study through oral presentation and written manuscript, and carry out research studies under ethical guidelines. Students will be able to apply the acquired knowledge in all disciplines of Psychology and will be prepared to engage in advance research in fields including, but not limited to, Cognition, Learning, Perception, Behavioral Neuroscience, Development, Personality, and Social Psychology.

Fall 2024: PSYC BC1010

PSYC BC1020 BEHAVIORAL RESEARCH METHODS AND ANALYSIS. 3.00 points.
This course is a prerequisite for all 2000-level PSYC lab courses, and a requirement for the Psychology Major. PSYC BC1001, or its equivalent, must be completed prior to or concurrently with this course. This class will introduce students to the fundamental scientific principles, experimental methods, and analytical approaches involved in the study of human behavior. The initial major topics to be covered include how basic scientific approach can be gainfully and ethically used to study human behavior. The following topics in the course will cover the most prevalent manners of collecting data in behavioral research and the most common types of statistical analyses and tests such data is subjected to. The latter topics in the course will introduce some of the more advanced experimental designs and statistical approaches that are more specific to the social sciences.

PSYC BC1088 THE SCIENCE OF LIVING WELL. 4.00 points.
3 points for lecture + 1 point for recitation

What does it mean to live a life well lived? The main mission of this course is to provide an up-to-date understanding of theoretical, empirical, and applied advances in the science of well-being and self-actualization. Consideration will be given to conflicting viewpoints and their respective empirical support, including the benefits of embracing both comfortable and uncomfortable emotions, the measurement and development of different models of well-being, and the implications of deliberately attempting to increase well-being. Throughout the course we will engage in experiential learning and practical exercises which will inform our theoretical and empirical understanding of the latest scientific findings and help you in your own personal journey to satisfy the fundamental needs of human existence and bring out the best in yourself. This course is comprised of a lecture and a discussion section.

PSYC BC1099 SCIENCE AND SCIENTISTS. 1.00 point.
Prerequisites: BC1001 or permission of the instructor.
Weekly meetings with researchers from Barnard, Columbia, and other guests to discuss the nature of scientific inquiry in psychology, and intellectual, professional, and personal issues in the work of scientists.

PSYC BC1101 STATISTICS LECTURE AND RECITATION. 4.00 points.
Prerequisites: BC1001 and instructor permission. Enrollment limited to 20 students per recitation section.
Prerequisite (or co-requisite): PSYC BC1001. Lecture course and associated recitation section introducing students to statistics and its applications to psychological research. The course covers basic theory, conceptual underpinnings, and common statistics. The following Columbia University courses are considered overlapping and a student cannot receive credit for both the BC course and the equivalent CU course: STAT UN1001 Introduction to Statistical Reasoning; STAT UN1121 Introduction to Statistics; STAT UN1201 Introduction to Statistics

PSYC BC2107 PSYCHOLOGY OF LEARNING - LEC. 3.00 points.
Prerequisites: BC1001 Introduction of Psychology or permission of the instructor. Enrollment limited to 72 students.
Prerequisites: PSYC BC1001 Introduction to Psychology or COGS UN1000 Introduction to Cognitive Science or permission of the instructor. Lecture course covering the basic methods, results, and theory in the study of how experience affects behavior. The roles of early exposure, habituation, sensitization, conditioning, imitation, and memory in the acquisition and performance of behavior are studied. The following Columbia University course is considered overlapping and a student cannot receive credit for both the BC course and the equivalent CU course: PSYC UN1440 Experimental: Learning and Motivation

PSYC BC2109 PERCEPTION - LAB. 2.50 points.
Prerequisites: PSYC BC1001, BC1020, BC1101. Corequisites: BC2110 Perception Lecture. Laboratory course to accompany BC2110. Students conduct experiments of seeing, hearing, touching, tasting, and smelling, and learn to report their findings. The following Columbia University course is considered overlapping and a student cannot receive credit for both the BC course and the equivalent CU course: PSYC UN1480 Perception and Attention (which includes PSYC UN1481 Perception and Attention Lab); and UN2230 Perception and Sensory Processes

PSYC BC2110 PERCEPTION - LECTURE. 3.00 points.
Prerequisites: PSYC BC1001 Introduction to Psychology or COGS UN1000 Introduction to Cognitive Science or permission of the instructor. Lecture course covering an introduction to problems, methods, and research in perception. Discussion of psychological studies of seeing, hearing, touching, tasting, and smelling. Note that this lecture can be taken without its affiliated lab, PSYC BC2109, however, if a student completes this lecture, she cannot enroll in the lab in a later semester. The following Columbia University course is considered overlapping and a student cannot receive credit for both the BC course and the equivalent CU course: PSYC UN1480 Perception and Attention; and PSYC UN2230 Perception and Sensory Processes
PSYC BC2114 COGNITIVE PSYCHOLOGY - LAB. 2.50 points.
Prerequisites: BC1001 Introduction to Psychology lecture, and instructor permission. Enrollment limited to 24 students per section.
Corequisites: PSYC BC2115
Prerequisites: PSYC BC1001, BC1020, BC1101. Corequisites: BC2115 Cognitive Lecture. Students conduct experiments related to selected topics illustrating the methods, findings, and theories of contemporary cognitive psychology. Topics include attention, memory, categorization, perception, and decision making. Special topics include neuropsychology and cognitive neuroscience.

PSYC BC2118 SYSTEMS # BEHAVIORAL NEUROSCIENCE-LAB. 1.50 point.
Prerequisites: BC1001 Introduction to Psychology lecture, and instructor permission. Enrollment limited to 16 students per section.
Corequisites: PSYC BC2119
Prerequisites: BC1001. Enrollment limited to 20 students per section. Corequisites: BC2119 Systems and Behavioral Neuroscience Lecture. Laboratory course to accompany BC2119. Students conduct experiments related to the physiological bases of behavior: development, organization and function of the nervous system; neurochemistry, neurophysiology and synaptic transmission. Topics include: the neural bases of sensory systems; homeostasis; sexual behavior; biological rhythms; emotionality and stress; learning and memory; and psychopathology. A portion of this course uses rats as experimental subjects and involves brain dissections.

PSYC BC2119 SYSTEMS # BEHAVIORAL NEUROSCIENCE-LEC. 3.00 points.
Prerequisites: BC1001 or permission of the instructor.
Prerequisites: BC1001 or permission of the instructor. Lecture course covering an introduction to the physiological bases of behavior: development, organization and function of the nervous system; neurochemistry, neurophysiology and synaptic transmission. Topics include: the neural bases of sensory systems; homeostasis; sexual behavior; biological rhythms; emotionality and stress; learning and memory; and psychopathology.

PSYC BC2155 CLINICAL LABORATORY. 2.50 points.
Corequisites: PSYC BC2156
Prerequisites: BC1001, BC1020, BC1101. Corequisite: PSYC BC2156
Clinical Psychology lecture. The purpose of the lab is to teach students
the research methods involved in creating clinical psychological
science. Students gain hands-on practice with clinical psychology
research methods. In the first half of the lab students conduct classroom
exercises demonstrating concepts such as reliability and validity and
and research methodologies such as randomized controlled trials (RCTs) and
treatment fidelity. In the second half of the class students design and run
a research study. Basic methodological issues will be explored in depth,
including research ethics, conducting literature reviews and writing up a
scientific report in APA style.

PSYC BC2156 CLINICAL PSYCHOLOGY. 3.00 points.
Prerequisites: PSYC BC1001
Prerequisites: PSYC BC1001 or permission of the instructor. An
introduction to the field of clinical psychology aimed at 1) becoming
familiar with professional issues in the field and 2) comparing therapeutic
approaches for their utility and efficacy. Therapeutic approaches covered
include psychodynamic therapies, cognitive behavior therapies, family/
child therapies. The course will critically examine a variety of professional
issues including ethical dilemmas, clinical assessment and diagnosis,
and use of technology in therapy. Note that this lecture can be taken
without its affiliated lab, PSYC BC2155, however, if a student completes
this lecture, she cannot enroll in the lab in a later semester.

PSYC BC2163 Human Learning and Memory. 3 points.
Prerequisites: BC1001 and at least one psychology lab course, or
permission of the instructor. Enrollment limited to 20 students.
Survey of contemporary theories and empirical research on human
memory. Topics will include sensory, short term and long term memory,
levels of processing, organization, forgetting, and encoding specificity.
Special topics include eyewitness testimony, amnesia, implicit memory,
and false memory.

PSYC BC2165 CHILD PSYCHOPATHOLOGY. 3.00 points.
Prerequisites: PSYC BC1001, BC2129, BC2141, and permission of the
instructor.
Prerequisites: PSYC BC1001, BC1129, BC2141, and permission of the
instructor. This course is designed to give students an introduction to
abnormal child psychology. We will study a variety of disorders typically
diagnosed in childhood, including intellectual disabilities, developmental
disabilities, emotional and behavioral disorders, and anxiety disorders.
Students will explore the DSM 5 diagnostic criteria, current research on
the etiology of disorders, and empirically-derived methods of assessment
and treatment. Current views of clinical issues in childhood will be
examined with an emphasis on the complex interaction between social,
cognitive, behavioral and societal factors involved in the development of
these disorders.

PSYC BC2175 Addictive Behaviors. 3 points.
Not offered during 2023-2024 academic year.
Prerequisites: PSYC BC1001 or PSYC UN1001 or BIOL BC1001 or BIOL
BC1002 or BIOL BC1500 or BIOL BC1502
This class will explore the topic of addiction at multiple levels, from how
drugs affect neurons to how drugs affect society. The course will also
cover addictive behaviors that do not appear to have a pharmacological
foundation, including pathological gambling, compulsive buying,
hypersexual behavior, food addiction, and internet addiction.

PSYC BC2177 PSYCHOLOGY OF DRUG USE # ABUSE. 3.00 points.
Prerequisites: BC1001 or permission of the instructor. Enrollment limited
to 75 students. Examines the biological, psychological, and social factors
that lead to drug use and abuse. A biopsychosocial model will be used
to examine the behavioral effects of prescription, over the counter, and
street drugs. Treatments, therapies, and theories of addictive behaviors
will be explored.

PSYC BC2178 FORENSIC PSYCHOLOGY. 3.00 points.
Prerequisites: PSYC BC1001 PSYC BC1001 Introduction to Psychology, or
its equivalent. Or permission of the instructor.
Every day there are thousands of individuals interacting with the legal
system. Are they mentally competent to stand trial? How can a judge
decide if it is in the best interests of a child to live with one, or both (or
neither) parent(s)? What is the risk of a violent offender repeating the
offense? What kinds of information influence juries? Does mediation
work to solve disputes? Forensic psychologists apply their knowledge
of psychology specifically in legal matters. This semester will focus on
the broad area of forensic psychology, exploring important legal cases
relevant to forensic psychology, police psychology, what constitutes
expert testimony, how assessments are conducted, and working as a
psychologist in the correctional system.

PSYC BC3152 Psychological Aspects of Human Sexuality. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: Junior or senior standing, BC1001 and two other
psychology courses and permission of the instructor. Enrollment limited
to 20 students.
This seminar is a critical examination of research and theory in human
sexuality. This part of the course is an overview of influential social
science. Students gain hands-on practice with clinical psychology
research methodologies such as randomized controlled trials (RCTs) and
and false memory.
PREREQUISITES: Junior or Senior standing and at least two psychology courses. Permission of the instructor required for majors other than Psychology or Women's Studies. Enrollment limited to 20 students. Examines how female experience is and has been understood by psychologists. Through an understanding of gender as a social construction and issues raised by the intersections of gender, sexuality, class, and race, the course will analyze assumptions about what causes us to be gendered and about how being gendered affects behavior.

PSYC BC3155 Psychology and Law. 4 points.
Not offered during 2023-2024 academic year.

Prerequisites: BC1001, one other psychology course, and permission of the instructor. Enrollment limited to 20 students.
This class will be taught at The Bedford Hills Correctional Facility for Women, and will be composed of a mix of four Barnard students and a group of Bedford inmates who are working toward a Bachelor's Degree. Survey of the research in social psychology as it relates to the legal process. Among the topics covered are eyewitness identifications, jury decision making, lie detection, child witnesses, confessions and interrogations, media effects, and capital punishment. Each of these problems will be considered from both a theoretical and an applied perspective.

PSYC BC3156 POLITICAL PSYCHOLOGY. 4.00 points.
Prerequisites: PSYC BC1001 BC1001, at least one psychology lab, and permission of the instructor.
Prerequisites: PSYC BC1001 BC1001, at least one psychology lab, and permission of the instructor. This seminar will explore what psychology can tell us about politics. The focus will be on citizens as active consumers of political information. Topics include ideology and partisanship, attitude formation and change, motivated reasoning, metacognition, persuasion, rationality, intergroup processes, conflict, distrust and conspiracism.

PSYC BC3158 Human Motivation. 4 points.
Prerequisites: BC1001 and permission of the instructor. Enrollment limited to 20 students.
Outlines major theoretical questions and research approaches in human motivation. In particular, it focuses on empirical investigations of motivation in social contexts, emphasizing goal formation, goal conflict, the self, and the influence of nonconscious processes. Motivation for competence, control autonomy, achievement, altruism, and intimacy will also be covered.

PSYC BC3162 INTRO TO CULTURAL PSYCHOLOGY. 4.00 points.
Prerequisites: BC1001 and either BC2124/2125, BC2125, BC2141, or permission of the instructor. Enrollment limited to 20 students; and senior psychology majors.
Prerequisites: BC1001; and either BC1124/1125, BC1125, BC2141, or permission of the instructor. Priority given to senior psychology majors. Critically investigates the universalizing perspectives of psychology. Drawing on recent theory and research in cultural psychology, examines cultural approaches to psychological topics such as the self, human development, mental health, and racial identity. Also explores potential interdisciplinary collaborations. The following Columbia University course is considered overlapping and a student cannot receive credit for both the BC course and the equivalent CU course: PSYC UN2650 Intro to Cultural Psychology.

PSYC BC3164 PERCEPTION AND LANGUAGE. 4.00 points.
Prerequisites: BC 1001 and one of the following: BC2106/2107, BC2109/2110, BC2118/2119, BC2128/2129, or permission of the instructor. Enrollment limited to 20 students.
Psychological investigations of spoken communication from a listener's perspective. Topics include perception and sounds of speech and the apprehension of meaning from words and utterances; the perceptual basis for rhyme and rhythm in speech; and the natural history of vocal communication.

PSYC BC3165 THE SOCIAL SELF. 4.00 points.
Review of the classic and contemporary empirical research pertaining to the self, with an emphasis on the self as a socially-based construct. Focus on the social basis of identity, self-concept, and self-regulation.

PSYC BC3166 SOCIAL CONFLICT. 4.00 points.
Prerequisites: BC1001 and one additional Psychology course. Or permission of the instructor. Enrollment limited to 20 students. Review of current literature in social psychology related to social conflict. We will examine factors that lead to conflict between individuals and between groups, as well as consequences of interpersonal conflict and effective strategies for conflict resolution. We will examine conflict in several applied domains, including the workplace and romantic relationships, and between religious, racial, and ethnic groups.

PSYC BC3170 Introduction to Psychoanalysis. 4 points.
Not offered during 2023-2024 academic year.

Prerequisites: BC1001 and BC2156 Introduction to Clinical Psychology. Or permission of the instructor. Enrollment limited to 20 students. Introduces the major contributors to contemporary psychoanalysis. Surveys changes in theory and technique covering Freud, Ego Psychology and Contemporary Freudian views, Object Relations Schools (e.g. Klein, Winnicott), Self Psychology, and Interpersonal and relational approaches. Additional topics may include relevant psychoanalytic research and applications to art, cultural considerations, and current controversies.
PSYC BC3179 CEPHALOPOD COGNITION. 4.00 points.
This seminar is designed to introduce you to the methods used to discern and describe the cognitive repertoire of novel, understudied, animals. The animals which we will specifically examine in the class are octopuses and cuttlefish. Over the course of the semester you will learn how we define cognitive abilities in humans and examine them in various animal species for modeling and comparison purposes. Each week you will examine one specific ability in humans, a traditional animal model, and a cephalopod. In this manner you will come to understand the historical process of understanding animal cognition, the current state of the literature in at least one area of cephalopod cognition and be capable of proposing a novel experiment as a way to extend our knowledge of that area of cephalopod cognition

Spring 2024: PSYC BC3179
Course Number  Section/Call  Times/Location  Instructor  Points  Enrollment
PSYC 3179  001/00449  Th 1:10pm - 3:00pm  318 Milbank Hall  Ken Light  4.00  13/16

PSYC BC3195 SEMINAR IN EDUCATIONAL PSYCHOLOGY: HUMAN LEARNING AND EDUCATIONAL PRACTICE. 4.00 points.
Prerequisites: PSYC BC1001
This seminar provides an introduction and overview of key contemporary research and professional issues in the field of Educational Psychology. Educational psychology can help students develop well-informed, empirically sound, creative, and ethical judgments about educational goals, policies, and practices. This course examines the theoretical and applied aspects of learning, motivation, human development, assessment and evaluation in the educational setting. Content includes the study of learning theories as well as cognitive, emotional, and social learning theories that underlie education and human development. Emphasis is placed on developing skills to better understand learners to foster improved learning, influence and manage classroom learning, and recognize and consider individual differences

PSYC BC3362 ANXIETY, OBSESSIVE-COMPULSIVE, AND RELAT. 4.00 points.
Prerequisites: (PSYCH BC2141) and (PSYCH BC1001)
Prerequisites: (PSYCH BC2141) and (PSYCH BC1001) This course presents an in depth investigation of anxiety disorders, obsessive-compulsive disorder (OCD), and OCD-related disorders, from a primarily psychological perspective. The course will focus on the phenomenology, correlates, and contributing factors of these conditions. Students will also learn about the current psychological treatments for these disorders. Emphasis will be placed on recent empirical research findings

Fall 2024: PSYC BC3362
Course Number  Section/Call  Times/Location  Instructor  Points  Enrollment
PSYC 3362  001/00243  T 12:10pm - 2:00pm  501 Diana Center  Michael Wheaton  4.00  7/15

PSYC BC3363 PEDAGOGY HIGHER EDUC:PSYCH. 4.00 points.
Designed to examine the science of psychology and the complexities of teaching to create an environment conducive to involved and active learning. The seminar, especially designed for current and intended Teaching Assistants, covers ethical concerns, strategies for maintaining boundaries, mastery learning, and approaches for leading discussions. Course uses case methods, videotaping, research projects, and scenario analysis. Enrollment limited to 12

PSYC BC3364 PSYCHOLOGY OF LEADERSHIP. 4.00 points.
Prerequisites: Students must have one of the following pre-requisites for this course: PSYC BC1125 Personality Psychology, PSYC BC1138 Social Psychology, or PSYC BC2151 Organizational Psychology, and permission by the instructor. An in-depth examination of the concept of leadership in psychology with an emphasis on women's leadership. Topics include the role of gender, culture, and emotional intelligence as well as an examination of transactional and transformational models. Topics will be discussed with an equal emphasis on theory, research, and application. Students must have prerequisites and permission of the instructor. Enrollment limited to 15

Spring 2024: PSYC BC3364
Course Number  Section/Call  Times/Location  Instructor  Points  Enrollment
PSYC 3364  001/00450  Th 2:10pm - 4:00pm  113 Milstein Center  Tara Well  4.00  13/16

PSYC BC3365 The Psychology Of Conspiracy. 4 points.
Not offered during 2023-2024 academic year.

Prerequisites: Psych BC1001, BC1101/1102, two PSYC laboratory courses, and permission of the instructor. Enrollment limited to 16. Why do some people believe in ghosts, psychic powers, UFO abductions, astrology, alternative medicine, or conspiracy theories? Does it matter? In this seminar, we will consider potential psychological explanations for a wide range of anomalous beliefs and experiences, and the consequences those beliefs can have.

PSYC BC3366 Eating Disorders. 4 points.
Not offered during 2023-2024 academic year.

Prerequisites: PSYC BC1001, PSYC BC2141
This course presents an in depth investigation of eating disorders including anorexia nervosa, bulimia nervosa, and binge eating from a primarily psychological perspective. The course will present both the current understandings of causes, correlates, and outcomes of eating pathology as well as the complexity and controversy surrounding these conceptualizations. Enrollment limited to 20 students. Senior psych majors will get first preference.

PSYC BC3367 Concepts, Questions, and Controversies in Evolutionary Psychology. 4 points.
Not offered during 2023-2024 academic year.

Prerequisites: BC1001 and permission of the instructor. Enrollment limited to 15 students.
An examination of the major concepts, debates, and research of evolutionary psychology. Will explore the extent to which the human mind and behavior are shaped by natural selection to solve specific, long-standing problems faced by our species over evolutionary time, such as finding a romantic partner, child-rearing, and gathering food.
PSYC BC3368 PSYCHOLOGY OF CREATIVITY. 4.00 points.
Prerequisites: BC1001 and permission of the instructor. Consideration of classic Psychodynamic (the unconscious/incubation), Psychometric (testing/training), and Personality (train/motivation) models of creativity. Application of contemporary Process (cognitive/problem-solving) models to art, literature, and independently selected areas of expertise. Process models are involving constraint selection within well-established domains are emphasized.

Spring 2024: PSYC BC3368
Course Number  Section/Call Number  Times/Location  Instructor  Points  Enrollment
PSYC 3368  001/00451  T 2:10pm - 4:00pm  Patricia Stokes  4.00  15/20

PSYC BC3369 LANGUAGE DEVELOPMENT. 4.00 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001, one Psychology laboratory course, one of the following: PSYC W2240, BC1128/1129, BC1129, or LIN BC V1101, and permission of the instructor. Enrollment limited to 15 students.
Prerequisites: PSYC BC1001 and one of the following: PSYC W2240, PSYC BC1129, or LING UN1101. Enrollment limited to 15 students.
Examine the acquisition of a first language by children, from babbling and first words to complex sentence structure and wider communicative competence. Signed and spoken languages, cross-linguistic variation and universals, language genesis and change, and acquisition by atypical populations will be discussed.

Fall 2024: PSYC BC3369
Course Number  Section/Call Number  Times/Location  Instructor  Points  Enrollment
PSYC 3369  001/00767  Th 10:10am - 12:00pm  Patricia Stokes  4.00  4/15
912 Milstein Center

PSYC BC3371 Gender Development. 4 points.
Prerequisites: (PSYC BC1001) and (PSYC BC1129) or (PSYC BC1138) PSYC BC1001 Introductory Psychology or equivalent, PSYC BC1129 Developmental Psychology or PSYC BC1138 Social Psychology, one Psychology laboratory course.
This course examines how individuals develop a concept of gender, across the lifespan. What cues trigger the classification of others, and oneself, by gender? What physiological, cognitive, and sociocultural processes guide this development? We will explore how various theoretical approaches in psychology help us understand this fundamental aspect of development.

PSYC BC3372 Comparative Cognition. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001 and one additional course in psychology. Or permission of the instructor. Enrollment limited to 20 students.
Review and critical evaluation of current empirical research investigating cognitive processes in both human and non-human species. Topics include comparisons in episodic memory, metacognition, theory of mind, self-awareness, and language abilities.

PSYC BC3373 HEALTH PSYCHOLOGY. 4.00 points.
Prerequisites: BC1001 and two more psychology courses, and permission of the instructor required. Consideration of research on the interaction of biological, psychological, and social factors related to physical health and illness. Topics include the relationship of stress to illness, primary prevention, mind-body methods of coping with stress and chronic illness (such as meditation), and the relationship between psychological factors and recovery from illness. Enrollment limited to 15.

Spring 2024: PSYC BC3373
Course Number  Section/Call Number  Times/Location  Instructor  Points  Enrollment
PSYC 3373  001/00452  Th 4:10pm - 6:00pm  Tara Well  4.00  12/16
308 Diana Center

PSYC BC3379 PSYCH OF STEREOTYPING/PREJUDIC. 4.00 points.
Prerequisites: (PSYC BC1001) Permission of the instructor.
Prerequisites: (PSYC BC1001) Permission of the instructor. Review of current literature from experimental social psychology pertaining to stereotyping and prejudice. Topics include: functions and costs of stereotyping, the formation and maintenance of stereotypes, and stereotype change. Recent research concerning the role of cognitive processes in intergroup perception will be emphasized.

Fall 2024: PSYC BC3379
Course Number  Section/Call Number  Times/Location  Instructor  Points  Enrollment
PSYC 3379  001/00741  T 12:10pm - 2:00pm  Isabelle Portelinha  4.00  16/16
202 Milbank Hall

PSYC BC3380 EXPLORING THE PSYCHOLOGY OF IMAGINATION. 4.00 points.
We spend much of our time in our imaginations: we daydream or immerse ourselves in fiction, children engage in pretend play, and we mentally simulate how our room might look if we rearrange the furniture. Imagination forms a critical link between perception, memory, creativity, and higher-order thinking. This seminar will examine imagination and mental simulation from the perspective of modern psychology. We will consider how imagination is formed in children, how it is used in adults, whether machines might imagine, and how we can study the contents of our imaginations.

Spring 2024: PSYC BC3380
Course Number  Section/Call Number  Times/Location  Instructor  Points  Enrollment
PSYC 3380  001/00454  M 1:10pm - 3:00pm  Michelle Greene  4.00  11/16
214 Milbank Hall

PSYC BC3381 Theory of Mind and Intentionality. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001 and one other Psychology course, or permission of the instructor. Enrollment limited to 15 students.
Survey and critical analysis of the developmental and neurological research on theory of mind - the attribution of mental states like belief, desire, and knowledge to others - in humans and nonhuman animals. Emphasis on the role of intentionality, stages of acquisition, neurological and genetic bases, and deficits in theory of mind.
PSYC BC3382 ADOLESCENT PSYCHOLOGY. 4.00 points.
Prerequisites: BC1001 and BC1129 Developmental Psychology or permission of the instructor. Enrollment limited to 20 senior majors. Barnard students receive priority. Examines adolescent development in theory and reality. Focuses on individual physiological, sexual, cognitive, and affective development and adolescent experiences in their social context of family, peers, school, and community. Critical perspectives of gender, race and ethnicity, sexuality, and teen culture explored.

PSYC BC3384 Social Cognition. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC 1001 and one of the following: BC1138/1137 Social Psychology, BC1115/1114 Cognitive Psychology, or permission of the instructor.
Survey of research from the field of social cognition, exploring cognitive processes involved in social functioning. Topics include attention, interpretation, evaluation, judgment, attribution, and memory processes. Both controlled and automatic processes will be considered, and the roles of motives, goals, and affective variables will be discussed.

PSYC BC3388 Imitation and Language. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001 and one Psychology Lab course, or permission of the instructor. Enrollment limited to 20 students. Examines the concept of imitation in behavior through research on animals, human development, and adult language use. Class meetings focus on discussion of reading material to develop a theory of the cognitive mechanisms of imitation that apply to language change in spoken communication.

PSYC BC3389 CURRENT TOPICS IN PERSONALITY. 4.00 points.
PSYC BC3390 CANINE COGNITION. 4.00 points.
Prerequisites: BC1001 and one other Psychology course. Enrollment limited to 15 students. Permission of the instructor is required. Examines the scientific study of the domestic dog. Emphasis will be on the evolutionary history of the species; the dogs social cognitive skills; canid perceptual and sensory capacities; dog-primate comparative studies; and dog-human interaction.

PSYC BC3391 Psychology of Time. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001 and additional psychology course, or permission of the instructor.
The seminar will explore how times are perceived, learned, remembered and used to guide decisions and behavior. The underlying brain mechanisms that create a sense of time and organize action will be discussed. Students will research how temporal information processing is foundational to core areas of psychology.

PSYC BC3393 Psychological Interventions for Developmental Disabilities. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: PSYC BC1001, BC2129, BC2156, or permission of the instructor. Seniors Psychology Majors given priority. This course provides an overview of psychological intervention processes in the field of developmental disabilities. Course content includes discussions of clinical and ethical issues related to diagnosis and treatment, and in-depth review of procedures used to teach appropriate behavior repertoires to individuals with developmental disabilities such as Autism Spectrum Disorders.

PSYC BC3394 METACOGNITION. 4.00 points.
Prerequisites: BC1001, and one psychology laboratory course; final enrollment determined on the first day of class Metacognition is one of the latest psychological buzzwords, but what exactly is metacognition? Metacognition enables us to be successful learners, problem solvers, and decision makers, and as often been used synonymously with words such as language, awareness, and consciousness. In this seminar, we will examine various components of metacognition, including its role in learning and memory, and its existence in various non-human populations. In addition, we will explore the fragility of metacognition, including illusions of confidence and harmful control strategies that people use. Readings will include classic and important recent papers in the field, looking at metacognition as a higher-level cognitive process, and as knowledge individuals use to guide behavior.

PSYC BC3395 Emotion and Self Regulation. 4 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001 Introduction to psychology and BC1138 Social Psychology, or permission of the instructor. Enrollment is determined at the first class meeting.
In this course, students will examine neuroscientific and psychological research and scholarly work pertaining to the ability to regulate – to control and manage – thoughts, emotions, behaviors, and social interactions. Research suggests what is possible to change, and by what mechanisms. Students will explore how evidence can reasonably be interpreted.
PSYC BC3399 HUMAN AND MACHINES. 4.00 points.
Prerequisites: (PSYC BC1001) and Instructor approval
Prerequisites: (PSYC BC1001) and Instructor approval This course will examine the social psychology of Human-Machine interactions, exploring the idea that well-established social psychological processes play critical roles in interactions with non-social objects. The first half of the seminar will examine the social psychology of perception across distinct sensory modalities (shape, motion, voice, touch), whereas the second half will focus on social psychological processes between humans and non-human entities (objects, computers, robots)

PSYC BC3406 SEM IN CLINICAL PSYCH: PSYCHOTIC DISORDERS AND BIPOLAR DISORDERS. 4.00 points.
Prerequisites: Prerequisites: PSYC BC1001 (or the equivalent) and PSYC BC2141 or permission of the instructor. Enrollment limited to 24 students. Final enrollment determined on the first day of class.
This seminar will focus on the schizophrenia-spectrum disorders and bipolar disorders. Topics include historical perspectives, diagnoses and symptoms, neural changes associated with the disorders, and research on effective treatments. Emphasis will be placed on the impact of serious mental illness on families and communities as well as cultural differences in diagnosis, treatment and outcomes.

PSYC BC3408 SEMINAR IN CLINICAL PSYCHOLOGY. 4.00 points.
This course offers an in-depth examination of depressive disorders, including major depressive disorder, persistent depressive disorder, post-partum depression, premenstrual dysmorphic disorder, and pediatric depression. Topics include historical perspectives, current understanding of diagnoses and symptoms, neural changes associated with the disorders, and research on effective treatments. Emphasis will be placed on the impact of depressive disorders on families and communities, as well as gender and cultural differences in diagnosis, treatment and outcomes. Adolescence is a peak period for the onset of mental disorders and suicidal behaviors. The seminar is designed to enhance understanding of topics including, prevalence, etiology, risk factors, mechanisms, prevention and treatment approaches, and ethical considerations related to clinical research.

PSYC BC3409 SOCIAL INTERACTION. 4.00 points.
In this seminar, we will read and discuss current literature in psychology related to social interaction. We will examine fundamental processes involved in social interaction, consider how social interaction varies as a function of people's social identities (e.g., gender, social class, and race), and discuss how social interaction influences close relationships, intergroup attitudes, and well-being. We will pay close attention to how these topics are studied (e.g., to methods, samples, and researcher identities) and to the broader implications of the research.

PSYC BC3465 Field Work # Research Seminar: Toddler Center. 4.00 points.
PSYC BC1129/2129 (with or without lab) as well as permission of the instructor. The Barnard Toddler Center provides the focus for this seminar and research in applied developmental psychology, an amalgam of developmental, educational, and clinical psychology. The seminar integrates theory and research and for AY 20-21 will use daily recordings of the toddler sessions as the centerpiece for understanding early development. The unique context of Covid19 will be used to understand risks in development, especially for vulnerable children and families.
Second term students will also conduct research on parenting during the pandemic

PSYC BC3466 FIELD WORK # RESEARCH SEMINAR: TODDLER CENTER. 4.00 points.
PSYC BC1129/2129 (with or without lab) as well as permission of the instructor. The Barnard Toddler Center provides the focus for this seminar and research in applied developmental psychology, an amalgam of developmental, educational, and clinical psychology. The seminar integrates theory and research and for AY 20-21 will use daily recordings of the toddler sessions as the centerpiece for understanding early development. The unique context of Covid19 will be used to understand risks in development, especially for vulnerable children and families.
Second term students will also conduct research on parenting during the pandemic
PSYC BC3606 INDEPENDENT STUDY. 1.00-4.00 points.
Prerequisites: Open to majors and non-majors with written permission of the department member who will supervise the project.
This course can be worth 1 to 4 credits (each credit is equivalent to approximately three hours of work per week), and requires a Barnard faculty as a mentor. The course will be taken for a letter grade, regardless of whether the student chooses 1, 2, 3, or 4 credits. The expectations for each of these options are as follows: 1 credit, 3h/week commitment, 5-10 page "Research Report" at the end of the term; 2 credits, 6h/week commitment, 5-10 page "Research Report" at the end of the term; 3 credits, 9h/week commitment, 15-20 page "Research Report" at the end of the term; 4 credits, 12h/week commitment, 15-20 page "Research Report" at the end of the term. "Research Report" is a document submitted to the person grading the student, the instructor of record for the section in which the student has enrolled. If a student is working off-site, then input from the off-site research mentor will inform the grading. The "Research Report" can take a variety of forms: progress reports on data collected, training received, papers read, skills learned, etc.; or organized notes for lab notebooks, lab meetings, etc.; or manuscript-like papers with Intro, Methods, Results, Discussion; or some combination thereof, depending on the maturity of the project. Ultimately, this will take different forms for different students/labs.

PSYC BC3617 SENIOR RESEARCH THESIS. 1.00 point.
Prerequisites: BC1001, BC1101, a minimum of five other completed psychology courses, and permission of the instructor. This is a year-long course. Open to senior psychology majors who submit a research proposal which has been approved by the course instructor and the project supervisor.
Discussions of the student’s Independent Research project during the fall and spring terms that culminate in a written and oral senior thesis. Each project must be supervised by a scientist working at Barnard or at another local institution.

PSYC BC3618 SENIOR RESEARCH THESIS. 1.00 point.
Prerequisites: BC1001, BC1101, a minimum of five other completed psychology courses, and permission of the instructor. This is a year-long course. Open to senior psychology majors who submit a research proposal which has been approved by the course instructor and the project supervisor.
Discussions of the student’s Independent Research project during the fall and spring terms that culminate in a written and oral senior thesis. Each project must be supervised by a scientist working at Barnard or at another local institution.

Africana Studies

AFRS BC3160 Fanon’s Psychology of the Oppressed. 4.00 points.
Frantz Fanon’s ideas have been influential for decades among theorists, practitioners, and activists alike. This seminar is focused on understanding Fanon’s particular perspective on the psychology of the oppressed and its relevance for examining the experience of past and present racialized inequality and its effects in society. The course is divided into four sections, which build cumulatively. I). An introductory section introduces Fanon’s central ideas (e.g., dialecticism, existentialism, post-colonialism) in their intellectual and socio-historical context (e.g., the Algerian revolution, African decolonization, South African Apartheid, the US civil rights and women’s rights movements). II). A second section locates Fanon in psychological theory and therapeutic theory and practice. The cultural and political (Eurocentric?) roots of psychological theory and practice are examined as are notions of oppression causing psychological and physical violence as well as psychopathology / psychological disorder. III). A third section examines Fanon and others psychological approaches to identity with particular attention to the presumed “inferiority complex” of oppressed peoples, nationalist and other reconstructions of identity in opposition to oppression, sociological psychological conceptualizations of stigma, and Dubois’s influential ideas regarding double consciousness. IV). A fourth and final section focuses on resistance and rebellion. The focus here is on the psycho-moral implications of (violent, peaceful, non-disruptive) action against oppression with reference to the distinct perspectives of Fanon in comparison to influential figures like Gandhi and M.L.K Jr. These issues are linked to a post-Fanon approach to the psychology of the oppressed called Liberation Psychology

Neuroscience and Behavior (Barnard)

NSBV BC1001 INTRODUCTION TO NEUROSCIENCE. 3.00 points.
This course is required for all the other courses offered in Neuroscience and Behavior. The course introduces students to the anatomy and physiology of the nervous system. The topics include the biological structure of the nervous system and its different cell types, the basis of the action potential, principles of neurotransmission, neuronal basis of behavior, sleep/wake cycles, and basic aspects of clinical neuroscience.

NSBV BC2154 HORMONES AND BEHAVIOR. 3.00 points.
Prerequisites: BC1001 or BIOL BC1101, BC1102, or permission of the instructor. Enrollment limited to 45 students.
Prerequisites: BC1001 or BIOL BC1101, BC1102, or permission of the instructor. Enrollment limited to 45 students. This class explores the complex interactions among genetics, hormones, environment, experience, and behavior. Topics covered include the endocrine system, sexual development, reproductive behavior, and social interactions such as affiliation, aggression, parenting, as well as homeostasis, biological rhythms, stress, memory, and mood

NSBV BC2180 Neurodevelopmental Processes and Cognitive/Behavioral Disorders. 3 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1118/1119, BC3177, BC3380, or BIOL BC3362. Enrollment limited to 30 students.
Explores the evolution of disorders affecting children due to some impairment in the brain or nervous system. Constitutional vulnerabilities demonstrate that nervous system injury varies as a function of neurodevelopmental stage. Disorders to be studied include those impacting language, hearing, vision, movement, mood and emotion, and learning.

NSBV BC3367 Transformative Landmarks in Neuroscience. 4 points.
Not offered during 2023-2024 academic year.
Modern neuroscience incorporates topics from molecular neurobiology to cognition. Cognate disciplines include psychology, biology, biochemistry, chemistry, neuropharmacology, neurology and psychiatry, physics, computational science. We review neuroscience landmarks through readings of scientific publications, news reports, and controversies surrounding apparently transformative research, and contemplate contemporary viewpoints that have the benefit of hindsight.

NSBV BC3376 PSYCHOBIOLOGY OF INFANT DEVELOPMENT. 4.00 points.
Prerequisites: BC1001 and BC1128/1129 Developmental (lab and lecture taken together) or BC1129 (only lecture). Or permission of the instructor. Enrollment limited to 15 students.
Prerequisites: BC1001 and BC1128/1129 Developmental (lab and lecture taken together) or BC1129 (only lecture). Or permission of the instructor. Enrollment limited to 15 students. Analysis of human development during the fetal period and early infancy. Review of effects of environmental factors on perinatal perceptual, cognitive, sensory-motor, and neurobehavioral capacities, with emphasis on critical conditions involved in both normal and abnormal brain development. Other topics include acute and long term effects of toxic exposures (stress, smoking, and alcohol) during pregnancy, and interaction of genes and the environment in shaping the developing brain of high-risk infants, including premature infants and those at risk for Sudden Infant Death Syndrome.

NSBV BC3377 Adolescent Neurobehavioral Development. 4 points.
Prerequisites: PSYC BC1001 Introduction to Psychology, or its equivalent; and permission of the instructor.
This seminar will explore neurobehavioral development throughout pubertal and adolescent stages of development. Specifically, topics will include how neuroendocrine changes induce pubertal onset, structural and functional changes in the adolescent brain, and how these developmental changes influence normal and abnormal psychophysiological processes. Students who complete this seminar will learn to: 1) demonstrate experimental methods used in developmental psychobiological research; 2) demonstrate the impact of structural and functional changes in the nervous system on the physiology and behavior of an individual; 3) critically read and interpret the primary research literature and discuss the strengths and weaknesses of experimental results; 4) conduct literature searches and synthesize these searches in to a comprehensive literature review; and 5) write a scientific literature review.

NSBV BC3380 Cognitive Neuroscience. 4 points.
Prerequisites: BC1001 and permission of the instructor. Enrollment limited to 20 students.
Exposition of research and theory in neuroscience with an emphasis on the use of neural imaging techniques (EEG, evoked potentials, MEG, PET, fMRI) for exploring sensation, perception, and cognition in the healthy, intact brain.

NSBV BC3381 Visual Neuroscience: From the Eyeball to the Mind's Eye. 4.00 points.
By absorbing electromagnetic radiation through their eyes, people are able to catch frisbees, recognize faces, and judge the beauty of art. For most of us, seeing feels effortless. That feeling is misleading. Seeing requires not only precise optics to focus images on the retina, but also the concerted action of millions of nerve cells in the brain. This intricate circuitry infers the likely causes of incoming patterns of light and transforms that information into feelings, thoughts, and actions. In this course we will study how light evokes electrical activity in a hierarchy of specialized neural networks that accomplish many unique aspects of seeing. Students will have the opportunity to focus their study on particular aspects, such as color, motion, object recognition, learning, attention, awareness, and how sight can be lost and recovered. Throughout the course we will discuss principles of neural information coding (e.g., receptive field tuning, adaptation, normalization, etc.) that are relevant to other areas of neuroscience, as well as medicine, engineering, art and design.

NSBV BC3383 Neuroparmacology and Behavior. 4 points.
Prerequisites: BC1001 and one of the following: BC1115, BC1119, or BIOL BC280. Permission of the instructor is required. Enrollment limited to 20 students.
Basic principles of the study of drugs that influence the neural systems and induce changes in behavior. Molecular, biochemical and behavioral characterization of psychotropic drugs: stimulants, sedative-hypnotics, anxiolytics, alcohol, hallucinogens, and opiates. Etiology and treatment of psychological and neurological disorders.

NSBV BC3387 TOPICS IN NEUROETHICS. 4.00 points.
Prerequisites: BC1001 and one of the following: Neurobiology, Behavioral Neuroscience, Fundamentals of Neuropsychology, or permission of the instructor. Enrollment limited to 20 students.
Prerequisites: BC1001 and one of the following: Neurobiology, Behavioral Neuroscience, Fundamentals of Neuropsychology, or permission of the instructor. Enrollment limited to 20 students. Recent advancements in neuroscience raise profound ethical questions. Neuroethics integrates neuroscience, philosophy, and ethics in an attempt to address these issues. Reviews current debated topics relevant to the brain, cognition, and behavior. Bioethical and philosophical principles will be applied allowing students to develop skill in ethical analysis.

NSBV BC3392 PSYCHOBIOLOGY OF STRESS. 4.00 points.
Not offered during 2023-2024 academic year.
Prerequisites: BC1001 and one of the following: BC1117, BC1119, BC3362, or permission of the instructor. Enrollment limited to 15 students.
This seminar will explore factors that modulate stress reactivity and the impact of stress on the structure and function of the nervous system and behavior. Topics will include how developmental stage, sex/gender, time of day, and experience influence how an organism responds to stress at endocrinological, neurobiological, and behavioral levels.

NSBV BC3394 Neurobiology of Social Behaviors. 4 points.
Prerequisites: (PSYC BC2119) or (PSYC BC3362)
This course explores behavioral neuroscience through a guided reading and discussion of recent scientific literature involving research in two “opposite” behaviors, sexual courtship and aggression. These are complex social behaviors that are highly conserved across species. Although some of their features are species-specific, there are broad similarities throughout the animal kingdom. Complex interactions between genes, environmental signals, and hormones influence the development and manifestation of these behaviors, but the core circuits involved appear to be pre-wired in the nervous system, as animals with no previous social experience can engage in normal encounters that are characterized by stereotyped behavioral patterns. The study of innate social behaviors in genetically tractable organisms offers unique opportunities to identify underlying neuronal circuitry, understand how this circuitry is genetically specified and elucidate the contributions of neuronal sexual dimorphism.
NSBV BC3396 Topics in Systems Neuroscience: The Receptive Field. 4 points.
Prerequisites: (Psyc BC1119) or (Biol BC3362)
How should we think about the brain? How can we simplify and interpret its dizzying complexities? And specifically, what conceptual frameworks are useful in constraining our interpretations of neuronal activity? This seminar – Topics in Systems Neuroscience – is aimed at defining and dissecting the ideas and models that guide our thinking about the brain. This semester the focus will be on the concept of the receptive field. We will examine how this idea has been applied across brain regions and sensory modalities and has been examined with experimental/computational approaches. Attention will be paid to both the historical background and contemporary views. The receptive field has provided a useful conceptual framework since the early 20th century. After developing the traditional concept of a sensory receptive field, we will critically examine the limits of this concept. This potentially simplifying concept underlying brain function also contains open questions regarding perception, cognition and behavior. By the end of the course we will develop a richer understanding of how conceptual frameworks, in general, can help (and hurt!) but ultimately hone our thinking.

NSBV BC3397 Neural Modulation. 4 points.
Prerequisites: BC1001 and permission of the instructor. Enrollment determined at first class meeting.
Excitatory and inhibitory neurotransmission is often influenced and altered by neuromodulators such as dopamine, acetylcholine, and serotonin. Imbalances in neuromodulation are implicated in many psychiatric disorders. This course will assess the role of neuromodulation under normal circumstances and how dysfunction in neuromodulation can lead to psychiatric disorders. This course will draw from groundbreaking primary literature and review articles published in the field of neuroscience.

NSBV BC3398 PSYCHOBIOLOGY OF SLEEP. 4.00 points.
Prerequisites: PSYC BC 1001, or equivalent, and permission of instructor. Enrollment limited to 20 students.
This seminar will explore sleep and circadian rhythms, emphasizing how these factors and their disruption influence human health, disease, function, and well-being. Topics will include the physiologic and neurobiological generation of sleep and circadian rhythms, and the interaction between these systems with cognitive, behavioral, endocrine, metabolic, and mood/psychiatric variables in humans, as well as sleep disorders and their treatment. NOTE: The course description is the same for the fall/spring course and the summer course

NSBV BC3405 NEUROSCIENCE OF TRAUMA. 4.00 points.
Prerequisites: PSYBC1119
This course provides a comprehensive overview of theoretical models and research relevant to the neurobiology, neurophysiology, neuroanatomy and neurodevelopmental processes underlying psychological trauma. Cognitive, emotional and behavioral symptoms associated with post traumatic experience are examined from a neuroscience perspective. Neurotherapeutic treatment interventions are reviewed and critiqued as models of applied clinical neuroscience

NSBV BC3593 RSRCH/SEM-NEUROSCNCE#BEHAVIOR. 4.00 points.
Prerequisites: Open to senior Neuroscience and Behavior majors. Permission of the instructor. This is a year-long course. By the end of the spring semester program planning period during junior year, majors should identify the lab they will be working in during their senior year.
Prerequisites: Open to senior Neuroscience and Behavior majors. Permission of the instructor. This is a year-long course. By the end of the spring semester program planning period during junior year, majors should identify the lab they will be working in during their senior year. Discussion and conferences on a research project culminate in a written and oral senior thesis. Each project must be supervised by a scientist working at Barnard or at another local institution. Successful completion of the seminar substitutes for the major examination

NSBV BC3594 RSRCH/SEM-NEUROSCNCE#BEHAVIOR. 4.00 points.
Prerequisites: Open to senior Neuroscience and Behavior majors. Permission of the instructor. This is a year-long course. By the end of the spring semester program planning period during junior year, majors should identify the lab they will be working in during their senior year.
Prerequisites: Open to senior Neuroscience and Behavior majors. Permission of the instructor. This is a year-long course. Discussion and conferences on a research project culminate in a written and oral senior thesis. Each project must be supervised by a scientist working at Barnard or at another local institution. Successful completion of the seminar substitutes for the major examination

Philosophy (Barnard)
PHIL V2400 Psychology and Philosophy of Human Experience. 3 points.
Not offered during 2023-2024 academic year.
We will discuss some of the most fundamental questions that one can pose about human experience. For example, we will investigate how we experience time, whether anything really has color, the difference between imagining and seeing, whether beauty is subjective, how we understand other people’s emotions, the ways in which the human mind is structured and the extent to which our minds are functionally fractionalize. By drawing on both scientific and philosophical texts we hope to combine the best features of both approaches.

Science/Technology/Engineering/Math (STEM)
STEM BC2223 PROGRAMMING BEHAV SCIENCES. 4.00 points.
